

RFP 3FY24 Vendor Questions

1. Will it be ok if we do white metal instead of Fiberglass?

I'm fine with aluminum as long as it's basically seamless. You can also quote it both ways, aluminum and fiberglass. Main thing is I want as few locations for water intrusion as possible. I also don't want to chase rust.

2. On 8 8-person bunk with a full bath can we do 440-gallon waste tank or does it have to be 700-gallon waste tank?

I'm also fine with the 440-gallon waste tank. These will be used for disaster response and black water pumping is usually lacking for some time. Having said that, the bigger the tanks you can give me on all the trailers the better.

3. What if I do not have any information to re-dact?

Please clearly state within your proposal that there is no information to be re-dacted otherwise include a redacted copy of your proposal per the RFP.
